Target version:	21.6.0	Spent time:	0.00 hour
Discuss:			
Description			
Provide an optional way of rendering QFQ reports without Typo3.			
Especially useful for selenium tests.			
Use a template engine like Twig or PhpCake or plain PHP.			
Possible hurdles:			
- Config			
- Typo3 Variables			
- User management			
- Page ID and Link

#4 - 25.08.2020 11:40 - Marc Egger

Currently there are two places for QFQ config:

(DB) Database Credentials: typo3conf/config.qfq.php
(OTHER) Everything else: typo3conf/LocalConfiguration.php

The following is a proposal for the file structure and qfq configuration location for new projects with and without Typo3:

new with Typo3

```
.
├── form
├── report
├── resource
└── ┬── thumbnail
```

```

├── log
├── app (served by apache)
│   ├── index.php
│   └── typo3conf
│       ├── LocalConfiguration.php (OTHER > has higher prio than qfq.config.json)
│       └── ext
│           └── qfq
└── qfq.json (DB) + (OTHER)

```

The root folder may be named freely. It is called "qfqProject" internally.

new without Typo3

```

.
├── form
├── report
├── resource
│   └── thumbnail
├── log
├── app (served by apache)
│   ├── index.php
│   └── qfq
└── qfq.json (DB) + (OTHER)

```

For existing projects an upgrade to the new QFQ version will produce the following file structure:

old with form/report as file

```

.
├── fileadmin
│   └── protected
│       └── qfqProject
│           ├── form
│           ├── report
│           ├── resource
│           │   └── thumbnail
│           ├── log
│           └── qfq.json (DB) + (OTHER)
├── index.php
├── typo3conf
│   ├── LocalConfiguration.php (OTHER &gt; has higher prio than qfq.config.json)
│   └── ext
│       └── qfq

```
