

QFQ - Feature #8962

allow for form fields with identical names

29.08.2019 21:41 - Nicola Chiapolini

Description			
We have a form with three Action-Elements all pointing to the same column. Each of them calculates the value based on a different dynamic-update form-field (restricted via requiredList). This works perfectly, but I need to adjust the name directly in the database... Could this check be removed? (At least for action elements, but I can imagine this to be useful even with native dynamic-update elements.)			

History

#1 - 29.08.2019 23:54 - Carsten Rose

- Priority changed from Normal to High

- Target version set to 146

Das sollte moeglich sein.

Moeglichkeit um das flexibel zu konfigurieren:

- Neue Konfigurationsoption (Store System): feSameName=allow|forbid|action
 - allow: FE Elemente mit identischem Namen ist ok.
 - forbid: FE Elemente mit identischem Namen sind nicht moeglich (Default).
 - action: FE Elemente mit identischem Namen sind fuer Action Elemente moeglich.
- Der Check in Form.name='FormElement', FE.label='Check Name Conflict' wird wie folgt angepasst:

```
sqlValidate={{!SELECT fe.id FROM FormElement AS fe WHERE "{{class:F:alnumx}}"=fe.class AND fe.formId={{formId:RF}} AND fe.name!=" AND fe.name="{{name:F:alnumx}}" AND fe.id!={{id:R0}} AND ('forbid'={{feSameName:VY}} OR ('action'={{feSameName:VY}} AND fe.class IN 'native,container') )}}
```

- Mit [#8963](#) (Variablen koennen einfach im V-Store gesetzt werden) kann das dann zusaetzlich auf Form.parameter und FormElement.parameter Ebene gesetzt weden.
