Description			
we want to use a REST API to transfer student data. So the best common identifier would be the shortname, but QFQ does not allow for a text in the id...			
(We can probably work around this by using the student id and removing the "-" signes, but this is not really elegant)

Irgendwie hatte ich bei der Implementierung schon befuerchtet das 'numerisch' nicht ausreicht - ich schaue mal wie aufwendig das ist.
